JOHNS POND (Carver)

General Information:

This 21-acre pond has an average depth of 12 feet and a maximum depth of 22 feet. The shoreline is lightly developed thanks in part to surrounding cranberry bogs to the north and east.

Access is through a town right-of-way located off Purchase Street, which is off of Route 58.

This pond was reclaimed in 1950 and 1956.

Fish Populations:

No recent surveys have been conducted on this pond, but it is known to contain largemouth bass, yellow perch and brown bullheads. Pumpkinseeds, bluegills, chain pickerel, white perch and golden shiners are also likely to be found here.

Fishing:

The Division has no current data on this pond. Given the depth and size of the pond, however, we can speculate that largemouth bass and yellow perch fishing should at least be fair. Historical data indicates that the pond is subject to an over-abundance of panfish, resulting in poor growth rates.
